**Subject: Supplement to Integrated Permit Package
Yankee Nuclear Power Station
Site Closure Project
Rowe, Massachusetts**

Dear Mr. Sneeringer:

Yankee Atomic Electric Company (YAEC) has prepared this letter as a follow-up to the Integrated Permit Package for the Yankee Nuclear Power Station Site Closure Project, dated 7 May 2004.

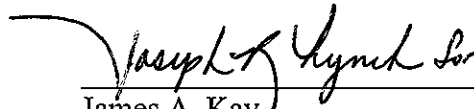

The post-decommissioning grading and planting plans have been modified since submittal of the Integrated Permit Package to take into account comments received from various permitting agencies and updated plans for grading the site. Therefore, YAEC has provided you with the *Post-Decommissioning Grading Plan and Stormwater Management Analysis* and the *Post-Decommissioning Planting Plan and Specifications* under separate cover. These documents are intended to address the questions you had regarding the impact of site regrading on stormwater flow in the West Storm Drain system. As you requested, the *Post-Decommissioning Grading Plan and Stormwater Management Analysis* includes a cross-section of the proposed drainage swale.

We also provided a *Wetland Restoration and Replication Plan* under separate cover, which was prepared to address impacts to Bordering Vegetated Wetlands that will occur during removal of the PCB-impacted road sand in the West Storm Drain Ditch.

We appreciate your continued cooperation. Should you have questions or require additional information, please contact Mr. Kenneth Dow, Environmental Manager (413) 424-2245.

Sincerely,

YANKEE ATOMIC ELECTRIC COMPANY

James A. Kay
Principal Licensing Engineer
